Elton is a by-product of the dairy industry. As a male unable to produce milk, he was doomed to be killed shortly after birth or sold as a veal calf. He was saved and lives in a sanctuary now.

The dairy industry depends on cows lactating and they can only do that when have given birth. Baby males like Elton, are considered waste, females face a life filled with the pain of repeated insemination, birth and separation, only to be slaughtered after 5 years for low-grade meat when their milk production is no longer profitable.
